**Services Provided:**

- **Geotechnical Studies**
- **Consulting Services**
- **Construction Observation**
- **Materials Testing Services**

**Project Summary:**

Cesare, Inc. (Cesare) performed geotechnical studies, consulting services, and construction observation and materials testing services during the construction of several Aurora Public School buildings including Gateway High School, Aurora Hills Middle School, William Smith High School, Hinkley High School, presently unnamed P-8 and high schools, and several mobile units. Geotechnical services typically include final design geotechnical recommendations in which Cesare worked with the architects and structural engineers to provide cost effective solutions to site specific geotechnical issues. Services during construction typically included moisture/density testing, hot mix asphalt density testing, concrete testing, masonry testing, drilled pier observation and structural steel inspections. Construction observations and test results were relayed to the school

district, general contractor, architect, and structural engineer on a weekly basis. Prompt communication and attention to detail allowed Cesare to provide Aurora Public Schools with many successful projects.
