**School District**  
**303-387-0312**

- Services Provided:**
- **Geotechnical Studies**
  - **Consulting Services**
  - **Construction Observation**
  - **Materials Testing Services**

**Project Summary:**

Cesare, Inc. (Cesare) performed geotechnical studies, consulting services, and construction observation and materials testing services during the construction of three high schools, three middle schools, twelve elementary schools, and numerous additions and renovations. Geotechnical services typically included both preliminary and final design geotechnical recommendations in which Cesare worked with the architects and structural engineers to provide cost effective solutions to site specific geotechnical issues. Services during construction typically included drilled pier observation, reinforcing steel observations, moisture/density testing, concrete testing, masonry observation

and testing, structural steel welding and bolt inspections, and hot mix asphalt density testing. Construction observations and test results were relayed to the school district, general contractor, architect, and structural engineer on a weekly basis. Prompt communication and attention to detail allowed Cesare to provide Douglas County School District with many successful projects.
