Services Provided:

- **Laboratory Testing**
- **Field Testing**
- **Design**
- **Consulting**

Project Summary:

Cesare, Inc. (Cesare) provided quality control testing for the heater remixing of State Highway 149 from milepost 42 to milepost 56 in Hinsdale County, Colorado. The project schedule was pushed back due to the South Fork forest fire that was in the immediate area at the beginning of the job. The project was approximately 14 miles long and initially contracted for a 3 inch remix, however, that was reduced to a 2 inch remix due to complications with compaction. The paving contractor encountered significant difficulties obtaining the required density in several locations on the project. Cesare provided design, consultation, coring, and laboratory studies to help resolve the compaction and constructability issues.
