Services Provided:

- **Engineering Consultation, Analysis, and Design**

Project Summary:

Cesare, Inc. (Cesare) was contacted to perform engineering consultation and design for a residential roadway in Superior, Colorado. Cesare was also asked to provide construction materials testing and observation for the project which included utility removal and replacement, subgrade testing, asphalt testing with nuclear gauge method and with cores, and concrete testing. The existing asphalt pavement was rubblized and became the base course for the new asphalt pavement. Issues onsite included expansive subgrade and saturated conditions.
